Adobe LiveCycle ES4 - Document Output Specialist

Course Description:

This workshop focuses on building LiveCycle applications using the Output module. This workshop consists of lectures and demonstrations combined with a series of exercises that focus on Output and Assembler that result in the creation of a print-on-demand. Topics covered include creating DDX files, designing forms for individual and batch printing. The workshop uses Adobe LiveCycle Workbench ES4, which is the integrated development environment (IDE) for creating LiveCycle applications. As well, you will use Document Builder to build DDX files and Designer to build templates.

Audience:	Java Developers and Business Process Developers

Training Method:	• Classroom Training • On-site at client's facility anywhere • Virtual/Online Training

Duration:	1 Day

Training Objectives:

The learner will create a print application to the extent that

- Workbench is used to develop
- XFA templates are designed for print
- Generate multiple record print streams
- Functionality is achieved as per exercise requirements
